## R Figure Example

The following code generates the plot on the next slide (taken from `help(bxp)` and modified slightly):

```
library(stats)
set.seed(753)
bx.p <- boxplot(split(rt(100, 4),
                      gl(5, 20)), plot=FALSE)
bxp(bx.p, notch = FALSE, boxfill = "lightblue",
    frame = FALSE, outl = TRUE,
    main = "Example from help(bxp)")
```

# R Table Example

A simple `knitr::kable` example:

```
knitr::kable(mtcars[1:5, 1:8],  
             caption="(Parts of) the mtcars dataset")
```

**Table 1:** (Parts of) the mtcars dataset
